APPLICATION AND REDUCTION:

MIL-DTL-53022D is normally applied over well cleaned, bare substrates. Mix FOUR PARTS epoxy primer with ONE PART of the catalyst provided in the kit. Allow 30 to 45 minutes wetting time. Spray one cross coat to achieve a dry film thickness of 0.3 0.5 mils. Use admixed material within 8 hours. Dry to touch in 5 minutes, to handle in 90 minutes. For brushing and rolling, thin with MIL-T-81772B Type 2 as needed for proper flow and ease of application not to exceed 1 pint per gallon. When thinning Ty. IV or Ty. V, it is recommended to use acetone to thin to maintain the HAPS free low VOC nature of the coating.
